Hi,This is Thanneermalai

By creating this dashboard, We are trying to visualise and interpret the huge amount of information (data)that ipl matches generate from 2008 to 2021 in a more meaningful way.

We can understand the impact of teams, team players, winning the toss, batting first, and the tournament place on the winning pattern.

Sports analytics is a recent trend and it's used to give an insight about the team's performance, the best batsman, best bowler and best batsman partnership. It's said that the Indian team heavily relies on this data analytics for planning its strategy to win the match. This dashboard also gives us information about opponent players playing strategies. So it reveals about opponent team's strengths and weaknesses.By creating this dashboard, We are trying to visualise and interpret the huge amount of information (data)that ipl matches generate from 2008 to 2021 in a more meaningful way.
